

# Server Board Disassembly

## Part Harvesting

Data center decommissioning involves retiring end-of-life IT equipment, such as server boards which contain expensive components. Often, these components can be harvested and resold or recycled. However, server board disassembly is a complex and labor intensive process.

### REMOVE KEY COMPONENTS

CPU's

HEAT SINKS

DIMM CARDS

## Leveraging Automation

Easily automate your server board disassembly process with Bright Machines® Microfactories, which leverage software, machine vision, and programmable robotic cells to quickly and accurately remove CPUs, heat sinks and DIMM cards from retired server boards.

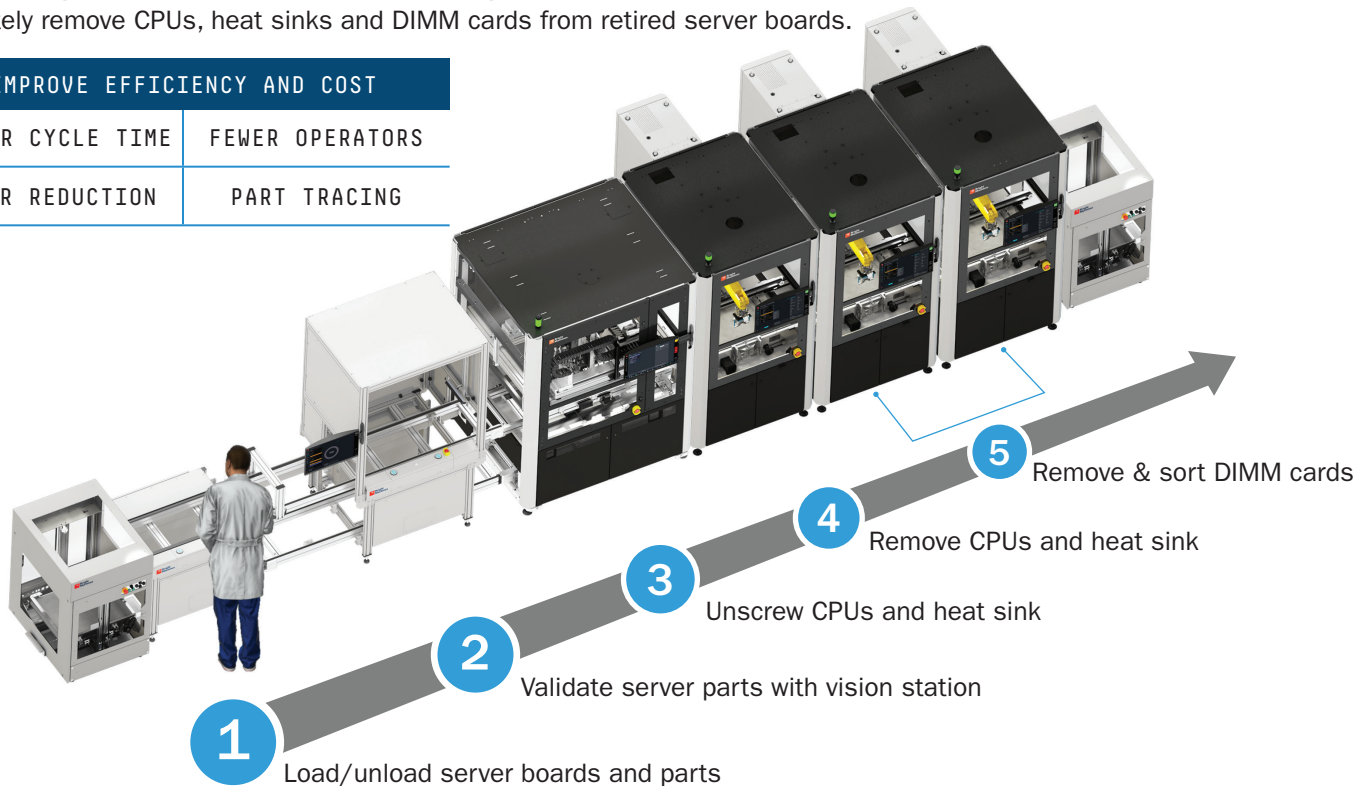

### IMPROVE EFFICIENCY AND COST

FASTER CYCLE TIME

FEWER OPERATORS

ERROR REDUCTION

PART TRACING
